Software Requirements Specifications

Introduction

The reason why we created this website was for our fake restaurant Tony's Kitchen. We want everyone to be able to look at our website and see the history of the restaurant, the menu and to be able to order online.

Purpose

The purpose of my website is to show everyone our fake restaurant Tony's Kitchen. It will advertise our food with pictures and descriptions. One page will have a menu, to where the user can explore the menu and then if they like what they see, they can order it right then and there.

Definitions, acronyms, and abbreviations

HTML – Hypertext markup language
CSS – Cascading Style Sheets
W3 Validation – refers to both Html and CSS validation tool provided by the W3c.org. the html validator is located at:
http://validator.w3.org/
with the CSS validator located at:
http://jigsaw.w3.org/css-validator/

Overall Description

My website will contain 6 different pages for the user to navigate through. These pages will give you some details about Tony, show you the menu, allow you to order online, give you some nutritional facts, show you some pictures and give you the history behind Tony's Kitchen. There is a navigation bar to get to all of these areas. Not only is the websites main purpose to have people order their food online and see the menu, you can also look up the history of the restaurant and Tony himself.

Final Project	Version <1.0>
